**§ 408.94 Pretreatment standards for existing sources.**

**§ 408.97 Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best conventional pollutant control technology (BCT).**

Any existing source subject to this subpart that introduces process wastewater pollutants into a publicly owned treatment works must comply with 40 CFR part 403. In addition, the following pretreatment standard establishes the quantity or quality of pollutants or pollutant properties controlled by this section which may be discharged to a publicly owned treatment works by a point source subject to the provisions of this subpart.

Except as provided in §§125.30 through 125.32, any existing point source subject to this subpart shall achieve the following effluent limitations representing the degree of effluent reduction attainable by the application of the best conventional pollutant control technology (BCT): The limitations shall be the same as those specified for conventional pollutants (which are defined in §401.16) in §408.92 of this subpart for the best practicable control technology currently available (BPT).

Pollutant or pollutant property	Pretreatment standard
pH .....	No limitation.
Oil and grease .....	Do.
TSS .....	Do.

**Subpart J—Remote Alaskan Shrimp Processing Subcategory**

The following standards of performance establish the quantity or quality of pollutants or pollutant properties, controlled by this section, which may be discharged by a new source subject to the provisions of this subpart:

**§ 408.100 Applicability; description of the remote Alaskan shrimp processing subcategory.**

The provisions of this subpart are applicable to discharges resulting from the processing of shrimp in remote Alaska. The effluent limitations contained in this subpart J are applicable to facilities not covered under subpart I of this part.
