### § 108.301

- (i) The unit's identification;
- (ii) A continuous line 40 centimeters (16 in.) wide on the perimeter; and
- (iii) Aiming circles as may be appropriate considering deck configuration, helicopter type, and operational requirements.
- (b) All markings must be in a contrasting color to the surface of the deck.

### Subpart C—Stability

### §108.301 Stability.

Each unit must meet the requirements in Subchapter S of this chapter that apply to Mobile Offshore Drilling Units.

[CGD 79-023, 48 FR 51008, Nov. 4, 1983]

## Subpart D—Fire Extinguishing Systems

### §108.401 Fire main system.

Each unit must have a fire main system.

## § 108.403 Fire extinguishing systems: General.

- (a) Each of the following on a unit must have an approved fixed gaseous type extinguishing system:
- (1) Each paint locker, oil room, and similar space.
- (2) Each enclosed space containing internal combustion or gas turbine main propulsion machinery.
- (3) Each enclosed space containing internal combustion machinery with an aggregate power of at least 1000 B.H.P.
- (4) Each enclosed space containing a fuel oil unit, including purifiers, valves, or manifolds for main propulsion machinery or internal combustion machinery with an aggregate power of at least 1000 B.H.P.
- (5) Each enclosed ventilation system for electric motors or generators used for vital services including bilge pumps, fire pumps, or propulsion.
- (b) Each space containing an oil fired boiler, the fuel oil unit or valves for the boiler, or manifolds in the line between the fuel settling tanks and the boiler on a unit must have a fixed gas

type, foam, or other approved fire extinguishing system.

[CGD 73–251, 43 FR 56808, Dec. 4, 1978, as amended by CGD 95–027, 61 FR 26008, May 23, 1996]

# § 108.403a Fire extinguishing systems: Non-vital services.

Each enclosed ventilating system for electric motors or generators not used for vital services must have an access into the system for firefighting or be protected by a fixed fire protection system.

# § 108.404 Selection of fire detection system.

- (a) If a fire detector is in a space, it must provide effective detection of fires most likely to occur in the space.
- (b) The fire detection system must be designed to minimize false alarms.

#### § 108.405 Fire detection system.

- (a) Each fire detection system and each smoke detection system on a unit must—  $\,$
- (1) Be approved by the Commandant in accordance with 46 CFR 161.002; and
- (2) Have a visual alarm and an audible alarm in the pilothouse or at a normally manned control station for the system.
- (b) Each fire detection system must be divided into zones to limit the area covered by any particular alarm signal.
  - (c) Each visual alarm must-
- (1) Have a chart or diagram next to the alarm that shows the location of the zones in the system and that contains the instructions for operating, and testing the system;
- (2) When activated show the zone in the system where fire has been detected; and
- (3) Be in a noticeable location in the pilothouse or control station.

[CGD 73-251, 43 FR 56808, Dec. 4, 1978, USCG-2012-0196, 81 FR 48266, July 22, 2016]

## § 108.407 Detectors for electric fire detection system.

- (a) Each detector in an electric fire detection system must be located where—
- (1) No portion of the overhead of a space protected is more than 3 meters (10 feet) from a detector;
