### 1 **SEC. 2. FINDINGS.**

2 Congress makes the following findings:

3 (1) Approximately 21 percent of physicians who  
4 were board certified in general internal medicine  
5 during the early 1990s have left internal medicine,  
6 compared to a 5 percent departure rate for those  
7 who were certified in subspecialties of internal medi-  
8 cine.

9 (2) The number of United States medical grad-  
10 uates going into family medicine has fallen by more  
11 than 50 percent from 1997 to 2005.

12 (3) In 2007, only 88 percent of the available  
13 medicine residency positions were filled and only 42  
14 percent of those were filled by United States medical  
15 school graduates.

16 (4) In 2006, only 24 percent of third-year inter-  
17 nal medicine resident intended to pursue careers in  
18 general internal medicine, down from 54 percent in  
19 1998.

1           (5) Primary care physicians serve as the point  
2 of first contact for most patients and are able to co-  
3 ordinate the care of the whole person, reducing un-  
4 necessary care and duplicative testing.

5           (6) Primary care physicians practicing preven-  
6 tive care, including screening for illness and treating  
7 diseases, can help prevent complications that result  
8 in more costly care.

9           (7) Patients with primary care physicians have  
10 lower health care expenditures and primary care is  
11 correlated with better health status, lower overall  
12 mortality, and longer life expectancy.

13           (8) Higher proportions of primary care physi-  
14 cians are associated with significantly reduced utili-  
15 zation.

16           (9) The United States has a higher ratio of spe-  
17 cialists to primary care physicians than other indus-  
18 trialized nations and the population of the United  
19 States is growing faster than the expected rate of  
20 growth in the supply of primary care physicians.

21           (10) The number of Americans age 65 and  
22 older, those eligible for Medicare and who use far  
23 more ambulatory care visits per person as those  
24 under age 65, is expected to double from 2000 to  
25 2030.

1           (11) A decrease in Federal spending to carry  
2 out programs authorized by title VII of the Public  
3 Health Service Act threatens the viability of one of  
4 the programs used to solve the problem of inad-  
5 equate access to primary care.

6           (12) The National Health Service Corps pro-  
7 gram has a proven record of supplying physicians to  
8 underserved areas, and has played an important role  
9 in expanding access for underserved populations in  
10 rural and inner city communities.

11           (13) Individuals in many geographic areas, es-  
12 pecially rural areas, lack adequate access to high  
13 quality preventive, primary health care, contributing  
14 to significant health disparities that impair Amer-  
15 ica’s public health and economic productivity.

16           (14) About 20 percent of the population of the  
17 United States resides in primary medical care  
18 Health Professional Shortage Areas.

4 the Secretary of Health and Human Services.

21 (B) One of the following conditions pre-  
22 vails within the area—

23 (i) the area has a population to full-

1 (ii) the area has a population to full-  
2 time-equivalent primary care physician  
3 ratio of less than 3,500 to 1 but greater

5 needs for primary care services or insuffi-  
6 cient capacity of existing primary care pro-  
7 viders.

8 (C) Primary medical care professionals in  
9 contiguous geographic areas are over-utilized.

12 cally underserved area” or “MUA” means a rational  
13 service area with a demonstrable shortage of pri-
