

conclusion that essentially no benefit would be achieved by requiring modifications to meet the single-failure criteria for the specific scenario during this time period.

IV

For these foregoing reasons, the NRC staff has concluded that it is not necessary to meet the single-failure requirement of Appendix K, Section I.D.1, with respect to (1) failure of Motor Control Center 3AB and the resulting inability to initiate an active means of controlling core boron concentration and (2) the active methods not meeting the single-failure criterion for the period when approved licensing methods predict that APS is not effective following certain LOCAs to adequately ensure that boron precipitation does not interfere with long-term cooling. The NRC staff has determined that there are special circumstances present, as specified in 10 CFR 50.12.(a)(2)(ii), in that application of 10 CFR Part 50, Appendix K, Section I.D.1, is not necessary in order to achieve the underlying purpose of this regulation, which is to provide adequate assurance that boron precipitation will not interfere with the capability of the ECCS to provide long-term core cooling.

Accordingly, the Commission has determined that, pursuant to 10 CFR 50.12(a), this exemption is authorized by law, will not endanger life or property or the common defense and security, and is otherwise in the public interest. Therefore, the Commission hereby grants the following exemption:

The Florida Power Corporation, et al., is exempt from the single-failure criterion requirement of 10 CFR Part 50, Appendix K, Section I.D.1, with respect to (1) failure of Motor Control Center 3AB and the resulting inability to initiate an active means of controlling core boron concentration and (2) failure of the active means to meet the single-failure criterion for the period when approved licensing methods predict that APS is not effective following reactor coolant pump discharge breaks provided that: procedural guidance shall be maintained that describes the actions necessary to restore an active method of boron precipitation mitigation in the event of a failure of Motor Control Center 3AB.

Pursuant to 10 CFR 51.32, the Commission has determined that the granting of this exemption will have no significant impact on the quality of the human environment (63 FR 54162).

This exemption is effective upon issuance.
