

health role and significance in population-based research of the genetics of congenital hearing impairment, (2) to develop strategies for population-based study of genetics of congenital hearing impairment, (3) to exchange ideas on the ethical and policy implications of public health research in the genetics of congenital hearing impairment, (4) to build partnerships between federal, state, academic, and private organizations to address activities for population genetics in congenital hearing impairment.

The workshop will provide a forum to discuss the strengths and limitations of several very specific study approaches that could be used to document the needed population-based research. We are particularly interested in strategies that involve collaboration with state-based Early Hearing Detection and Intervention (EHDI) programs. We are particularly interested in the perspectives of genetic ethicist; the deaf and hard-of-hearing communities; and state and local participants in universal newborn hearing detection and intervention programs.
