

a gross electric power output of 66 megawatts (the alfalfa gas was to be supplemented with natural gas as needed). Another 37 megawatts were to be generated from the super-heated, high-pressure steam recovered from the hot combustion gases leaving the combustion turbine. Since the biomass gasification technology proposed for MAPP has yet to be successfully demonstrated at full commercial scale, DOE was proposing to fund \$44 million (up to 30%) of the cost of construction of the plant and associated facilities (approximately \$140 to \$200 million) as part of the Department's mission to support biomass technology commercialization. Other key participants in the MAPP project have included the University of Minnesota, Stone and Webster Engineering Corporation, Kvaerner/Carbona Corporation, Enron Capital and Trade Resources Corporation, the National Renewable Energy Laboratory, and the Oak Ridge National Laboratory. Enron Capital and Trade Resources Corporation, however, terminated its co-development participation in the MAPP project in early 1999.

In the event that MnVAP elects to proceed with the MAPP project without funding from DOE, an analysis of the relative impact of the proposed project on the environment would still be required under applicable Minnesota laws and regulations. In such an event, the MEQB, in accordance with applicable laws and regulations, would be the lead agency for the environmental analysis. While DOE may be asked by the MEQB to assist by providing relevant information to any Minnesota led environmental analysis, DOE would no longer participate as a lead agency or as a co-preparer.
