The number of firms who process food using irradiation is extremely limited. FDA estimates that there is a single irradiation plant whose business is devoted primarily (i.e., approximately 100 percent) to irradiation of food and other agricultural products. Two other firms also irradiate small quantities of food (mainly spices). FDA estimates that this irradiation accounts for no more than 10 percent of the business for each of these firms. Although recent FDA rulemaking has authorized the irradiation of red meat, United States Department of Agriculture/Food Safety and Inspection Service (USDA/FSIS) has yet to issue a rule regarding meat irradiation. Actual implementation of meat irradiation cannot take place until USDA/FSIS final regulations are in place, which may not take place until later this fiscal year. At this time, FDA has no basis for estimating the extent of changes in the food irradiation business as a result of future USDA/FSIS actions. Therefore, the average estimated burden is based on: (1) Facility devoting 100 percent of its business (or 300 hours for recordkeeping annually) to food irradiation; (2) facilities devoting 10 percent of their business or 60 hours (2 x 30 hours) for recordkeeping annually, to food irradiation or (300 + 60)/3 = 120x 3 firms x 1 hour = 360 hours annually.

No burden has been estimated for the labeling requirements in §§ 179.21(b)(2)(i) and (b)(2)(ii) and 179.26(c) because the information to be disclosed is information that has been supplied by FDA. Under 5 CFR 1320.3(c)(2), the public disclosure of information originally supplied by the Federal Government to the recipient for the purpose of disclosure to the public is not a collection of information.
