

I. Background

The CPS has been the principal source of the official Government statistics on employment and unemployment for over 50 years. Collection of labor force data through the CPS is necessary to meet the requirements in Title 29, United States Code, Sections 1 and 2. Over the past several decades, the economy of the United States has been undergoing a fundamental restructuring. Advances in computer and communications technology have increasingly enabled some workers to perform part or all of their work at home. The growth of this phenomenon represents an important development in this country's labor markets. This supplement will provide a substantial and objective set of data about work at home and work in home-based businesses. It will provide valuable information on the work schedules of employed persons, that is, the beginning and ending times of work, type of shift worked, and calendar days worked. It also will provide information about employed persons who do work at home. Work schedule supplements have been conducted since the 1970s. Questions on home-based work were included in May 1985, May 1991, and May 1997. A key purpose of the May 2001 collection is to gather updated information on these topics. In particular, it is widely believed that the number of persons who work at home is growing rapidly, and the May 2001 supplement will provide information that will help researchers gauge the extent to which this group is expanding and provide additional detail on the nature of this work activity. More generally, the May 2001 Work Schedule Supplement will be used by BLS researchers and others to examine the changes in work schedules and work at home that are taking place over time.

II. Desired Focus of Comments

The Bureau of Labor Statistics is particularly interested in comments which:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who

are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

III. Current Action

OMB clearance is being sought for the Work Schedules Supplement to the CPS.

Type of Review: Reinstatement, with change, of a previously approved collection for which approval has expired.

Agency: Bureau of Labor Statistics.

Title: Work Schedules Supplement to the CPS.

OMB Number: 1220-0119.

Affected Public: Households.

Total Respondents: 58,000.

Frequency: Monthly.

Total Responses: 58,000.

Average Time Per Response: 4.5 Minutes.

Estimated Total Burden Hours: 4,350 Hours.

Total Burden Cost (capital/startup): \$0

Total Burden Cost (operating/maintenance): \$0

Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval of the information collection request; they also will become a matter of public record.

Signed at Washington, D.C., this 31st day of October, 2000.

W. Stuart Rust, Jr.,

*Chief, Division of Management Systems,
Bureau of Labor Statistics.*

BILLING CODE 4510-24-P

NUCLEAR REGULATORY COMMISSION

[IA-00-032]

In the Matter of Hiram J. Bass; Order Prohibiting Involvement in NRC-Licensed Activities (Effective Immediately)

I

Hiram J. Bass was formerly employed as the Measuring and Test Equipment (M&TE) Program Administrator by Tennessee Valley Authority (TVA or Licensee). The Licensee is the holder of License Nos. DPR-33, DPR-52, DPR-68, issued by the Nuclear Regulatory Commission (NRC or Commission) pursuant to 10 CFR part 50 on December 20, 1973, August 2, 1974, and August 18, 1976, respectively. The licenses

authorize the operation of the Browns Ferry Nuclear Plant Units 1, 2, and 3 (BFN or facility) in accordance with the conditions specified therein. The facility is located on the Licensee's site in Athens, Alabama.

II

On September 21, 1999, the Nuclear Regulatory Commission's (NRC) Office of Investigations (OI) initiated an investigation to determine whether Hiram J. Bass deliberately failed to issue and/or disposition nonconformance evaluations as required by site procedures while employed as the M&TE Program Administrator at the facility. The NRC also conducted an inspection of this issue during the period April 2 through June 24, 2000. The results of this investigation and inspection were documented in NRC Inspection Report 50-259/00-03, 50-260/00-03, 50-296/00-03, issued on July 27, 2000, and our letter to Mr. Bass dated July 31, 2000.

As background, certain M&TE used at BFN is calibrated on a regular basis by TVA's Central Laboratory Field Testing Services (CLFTS). When CLFTS identifies an instrument that is out of tolerance, that information is forwarded to the BFN Maintenance Department, M&TE Group. The M&TE Program Administrator is responsible for issuing and ensuring disposition of each nonconformance evaluation for M&TE found to be out of tolerance. The purpose of a nonconformance evaluation is, among other reasons, to initiate the facility review process to ensure that plant components have not been negatively affected by the out-of-tolerance M&TE, and to initiate action to address plant components that have been affected.

BFN Technical Specification 5.4.1, BFN Site Standard Practice Procedure (SSP)-6.7, Control of Measuring and Test Equipment, Revision 8A, effective May 27, 1997 through June 1, 1998, and TVA Standard Programs and Processes Procedure (SPP)-6.4, Measuring and Test Equipment, Revision 0, effective May 29, 1998, through August 15, 1999, together require nonconformance evaluations to be issued and dispositioned for conditions such as lost M&TE or standards, out-of-tolerance M&TE or plant standards, damaged or otherwise defective M&TE or plant standards, and disassembled M&TE or plant standards.

In June 1999, a BFN self-assessment of the M&TE program revealed that several out-of-tolerance M&TE items did not have nonconformance evaluations initiated by BFN. Further TVA review determined that, from June 1997 to June

1999, approximately 500 nonconformance evaluations were not properly issued and/or dispositioned for components tested or inspected using the out-of-tolerance M&TE. When questioned by TVA and subsequently by the NRC OI, Mr. Bass failed to explain why the large number of nonconformance evaluations had not been issued and/or dispositioned. On June 21, 1999, following questions by TVA regarding this matter, Mr. Bass resigned from TVA.

The NRC's investigation and inspection of this matter concluded that Mr. Bass deliberately failed to issue and/or disposition nonconformance evaluations on test equipment that was out-of-tolerance, in accordance with BFN Technical Specification required Licensee procedures.

The NRC informed Mr. Bass by certified letter dated July 31, 2000, of the results of the NRC's investigation and inspection of this matter, and provided Mr. Bass the opportunity to respond to this matter or request a predecisional enforcement conference. Receipt of the letter by Mr. Bass was verified by his signature on the certified mail return receipt. The NRC has attempted to contact Mr. Bass by telephone on numerous occasions; however, to date he has not responded to the NRC's July 31, 2000 letter.

III

Based on the above, the NRC has concluded that Mr. Bass engaged in deliberate misconduct from approximately June 1997 to June 1999, by deliberately failing to adhere to Technical Specification 5.4.1 required Licensee procedures related to out of tolerance measuring and test equipment (M&TE).

These actions constituted a violation of 10 CFR 50.5(a)(1), which prohibits an individual from engaging in deliberate misconduct that causes a licensee to be in violation of any rule, regulation, or order or any term, condition or limitation of any license issued by the Commission. As defined by 10 CFR 50.5(c)(2), deliberate misconduct means an intentional act or omission that the person knows constitutes a violation of a requirement, procedure, or instruction of a licensee; in this case Technical Specification 5.4.1. The NRC must be able to rely on the Licensee and its employees to comply with NRC requirements. Mr. Bass' conduct raises serious doubt about his trustworthiness and reliability; particularly whether he can be relied upon to comply with NRC requirements in the future.

Consequently, I lack the requisite reasonable assurance that licensed

activities can be conducted in compliance with the Commission's requirements and that the health and safety of the public will be protected if Mr. Bass were permitted at this time to be involved in NRC-licensed activities. Therefore, the public health, safety and interest require that Mr. Bass be prohibited from any involvement in NRC-licensed activities for a period of three years from the date of his resignation from the Licensee (June 21, 1999). Additionally, Mr. Bass is required to notify the NRC of his first employment after the prohibition period ends and all subsequent employment in NRC-licensed activities for a period of three years following the prohibition period. Furthermore, pursuant to 10 CFR 2.202, I find that the significance of Mr. Bass' conduct described above is such that the public health, safety and interest require that this Order be immediately effective.

IV

Accordingly, pursuant to sections 103, 161b, 161i, 161o, 182 and 186 of the Atomic Energy Act of 1954, as amended, and the Commission's regulations in 10 CFR 2.202, and 10 CFR 50.5, it is hereby ordered, effective immediately, that:

1. Hiram J. Bass is prohibited for three years from the date of his resignation, June 21, 1999, from engaging in NRC-licensed activities. NRC-licensed activities are those activities that are conducted pursuant to a specific or general license issued by the NRC, including, but not limited to, those activities of Agreement State licensees conducted pursuant to the authority granted by 10 CFR 150.20.

2. If Mr. Bass is currently involved with another licensee in NRC-licensed activities, he must immediately cease those activities, and inform the NRC of the name, address and telephone number of the employer, and provide a copy of this Order to the employer.

3. For a period of three years after the three year period of prohibition has expired, Mr. Bass shall, within 20 days of his acceptance of each employment offer involving NRC-licensed activities or his becoming involved in NRC-licensed activities, as defined in Paragraph IV.1 above, provide notice to the Director, Office of Enforcement (OE), U.S. Nuclear Regulatory Commission, Washington, DC 20555, of the name, address, and telephone number of the employer or the entity where he is, or will be, involved in the NRC-licensed activities. In the first notification, Mr. Bass shall include a statement of his commitment to compliance with regulatory requirements and the basis

why the Commission should have confidence that he will now comply with applicable NRC requirements.

The Director, OE, may, in writing, relax or rescind any of the above conditions upon demonstration by Mr. Bass of good cause.

V

In accordance with 10 CFR 2.202, Hiram J. Bass must, and any other person adversely affected by this Order may, submit an answer to this Order, and may request a hearing on this Order, within 20 days of the date of this Order. Where good cause is shown, consideration will be given to extending the time to request a hearing. A request for extension of time must be made in writing to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and include a statement of good cause for the extension. The answer may consent to this Order. Unless the answer consents to this Order, the answer shall, in writing and under oath or affirmation, specifically admit or deny each allegation or charge made in this Order and shall set forth the matters of fact and law on which Mr. Bass or other person adversely affected relies and the reasons as to why the Order should not have been issued.

Any answer or request for a hearing shall be submitted to the Secretary, U.S. Nuclear Regulatory Commission, ATTN: Rulemakings and Adjudications Staff, Washington, DC 20555. Copies also shall be sent to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, Washington, DC 20555, to the Associate General Counsel for Hearings, Enforcement & Administration at the same address, to the Regional Administrator, NRC Region II, 61 Forsyth Street, SW, Suite 23T85, Atlanta, GA, 30303, and to Mr. Bass, if the answer or hearing request is by a person other than Mr. Bass.

If a person other than Mr. Bass requests a hearing, that person shall set forth with particularity the manner in which his interest is adversely affected by this Order and shall address the criteria set forth in 10 CFR 2.714(d).

If a hearing is requested by Mr. Bass or a person whose interest is adversely affected, the Commission will issue an Order designating the time and place of any hearing. If a hearing is held, the issue to be considered at such hearing shall be whether this Order should be sustained.

Pursuant to 10 CFR 2.202(c)(2)(i), Mr. Bass may, in addition to demanding a hearing, at the time the answer is filed or sooner, move the presiding officer to set aside the immediate effectiveness of

the Order on the ground that the Order, including the need for immediate effectiveness, is not based on adequate evidence but on mere suspicion, unfounded allegations, or error.

In the absence of any request for hearing, or written approval of an extension of time in which to request a hearing, the provisions specified in Section IV above shall be final 20 days from the date of this Order without further order or proceedings. If an extension of time for requesting a hearing has been approved, the provisions specified in Section IV shall be final when the extension expires if a hearing request has not been received. An answer or a request for hearing shall not stay the immediate effectiveness of this order.

For the Nuclear Regulatory Commission.

Dated: Dated this 27th day of October 2000.

R.W. Borchardt,

Director, Office of Enforcement.

BILLING CODE 7590-01-P

NUCLEAR REGULATORY COMMISSION

[Docket No. 50-255]

Consumers Energy Co.; Palisades Plant; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (NRC) is considering issuance of an amendment to Facility Operating License No. DPR-20, issued to Consumers Energy Company (the licensee), for operation of the Palisades Plant, located in Van Buren County, Michigan.

Environmental Assessment

Identification of the Proposed Action

The proposed action would change the expiration date of the Operating License from "midnight on March 14, 2007" to "midnight on March 24, 2011." Palisades is currently licensed to operate 40 years commencing with the issuance of the construction permit on March 14, 1967. At present, the Facility Operating License expires at midnight on March 14, 2007. The licensee seeks an extension of the license term to allow Palisades to operate until 40 years from the issuance of its Provisional Operating License. The Provisional Operating License for Palisades was issued on March 24, 1971. This action would extend the period of operation to the full 40 years provided by the Atomic Energy Act and the Code of Federal Regulations.

The proposed action is in accordance with the licensee's application for license amendment dated April 27, 2000.

The Need for the Proposed Action

The proposed action is needed to allow the licensee to continue to operate Palisades for 40 years from the date of issuance of the Provisional Operating License. This extension of 4 years and 10 days would permit Palisades to operate for the full 40-year design-basis lifetime, consistent with the Commission's policy stated in a memorandum dated August 16, 1982, from William Dircks, Executive Director for Operations, to the Commissioners, and as evidenced by the issuance of more than 50 such extensions to other licensees.

Environmental Impacts of the Proposed Action

The NRC has completed its evaluation of the proposed action and concludes that extending Facility Operating License No. DPR-20 for 4 years and 10 days would not create any new or unreviewed environmental impacts. This change does not involve any physical modifications to Palisades and there are no new or unreviewed environmental impacts that were not considered as part of the Final Environmental Statement (FES) related to operation of Palisades, dated June 1972, as supplemented by a final addendum (NUREG-0343), dated February 1978, related to an increase in core power level, and as supplemented by an environmental assessment (EA) dated October 22, 1990, related to conversion of the Provisional Operating License to a 40-year full-term Facility Operating License, which concluded that an FES supplement was not necessary. Evaluations for the FES, as supplemented by the final addendum and by the EA, considered a 40-year operating life. The considerations involved in the NRC staff's determination are discussed below.

Radiological Impacts of the Hypothetical Design-Basis Accidents

The offsite exposure from releases during postulated accidents was evaluated and found acceptable during the operating license stage and subsequent license amendments. This type of evaluation involves four issues: (1) Type and probability of postulated accidents, (2) the radioactive material releases calculated for each accident, (3) the assumed meteorological conditions, and (4) population size and distribution in the vicinity of Palisades. The NRC staff has concluded that neither the type

and probability of postulated accidents nor the radioactive material releases calculated for each accident would change through the proposed extended operation. As discussed in Sections 2.5.5 and 2.5.6 of Palisades' Updated Final Safety Analysis Report (UFSAR), more recent meteorological data collected onsite (1983 to 1997 for short-term and 1988 to 1993 for long-term atmospheric dispersion potentials) since issuance of the Operating License have resulted in generally more favorable atmospheric dispersion estimates such that the earlier analyses of the offsite consequences of postulated radiological releases to the atmosphere remain bounding. A comparison of the 1980 population in the UFSAR with the actual 1990 census data shows a 3.5-percent decline in the permanent resident population within 10 miles of Palisades. Using 1990 census data and recent surveys to establish the possible transient population, the licensee found that the maximum probable population within the 10-mile Emergency Planning Zone has declined from that shown in the UFSAR for 1980. The 1998 estimated population for the 13 cities and townships within 10 miles of Palisades declined by 1 percent from the 1990 census. These declining trends are expected to continue such that the population for the period 2007 through 2011 should be well within the previous FES and UFSAR projections. There are no changes to the current exclusion area, low population zone, and nearest population center distance, and the licensee will continue to meet the requirements of 10 CFR 100.11(a) for the proposed license term extension. Also, there is no expected change in land usage during the license terms that would affect offsite dose calculations. Therefore, cumulative exposure to the general public due to a design-basis accident would be within the bounds of the original projections because of the lower than projected population and improved meteorological conditions for the site and surrounding area.

Accordingly, the NRC staff concludes that the proposed action will not significantly change previous conclusions regarding the potential environmental effects of offsite releases from postulated accident conditions.

Radiological Impacts of Annual Releases and Occupational Exposures

On an annual basis, the licensee submits an Occupational Radiation Exposure Report to the NRC. The data in these reports show that the collective occupational exposure at Palisades is in a declining trend. The 3-year annual average collective occupational
