

the San Joaquin River Agreement (SJRA).

The purpose of the Proposed Action is to supplement, under Paragraph 8 of the SJRA, the water provided by the SJRA that has been analyzed in the FEIS/EIR. The supplemental water consists of up to 47,000 acre-feet from the Tuolumne and Merced rivers to provide full Vernalis Adaptive Management Plan (VAMP) test flow conditions at Vernalis during "double step years" for water years 2001 through 2010. This supplemental water may also assist Reclamation in meeting the Anadromous Fish Restoration Plan, Bay-Delta flow objectives as required by State Board Decision 1641, and the U.S. Fish and Wildlife Service's 1995 Biological Opinion for Delta Smelt.

The Proposed Project/Action area includes the Tuolumne, Merced, Stanislaus, and San Joaquin Rivers and related reservoirs and water districts in the counties of Tuolumne, Merced, Stanislaus, San Joaquin, Mariposa, and Calaveras counties.

There also may be circumstances in which we would withhold a respondent's identity from public disclosure, as allowable by law. If you wish us to withhold your name and/or address, you must state this

SUPPLEMENTARY INFORMATION: The SJRA was established to provide a level of protection equivalent to the San Joaquin River flow objectives contained in the State Water Resources Control Board's (SWRCB) 1995 Water Quality Control Plan for the lower San Joaquin River and San Francisco Bay-Delta Estuary (Delta). A key part of the SJRA is the VAMP which is a scientifically-based adaptive fishery management plan to help determine the relationships between flows, exports, and other factors on fish survival in this region of the Delta. The SWRCB adopted pertinent provisions of the SJRA on December 29, 1999, and issued its Revised Water Right Decision 1641 (D-1641) containing these provisions on March 15, 2000. D-1641 approved implementation of the VAMP through December 31, 2011.

SJRGA and Reclamation prepared the FEIS/EIR in January 1999 to meet CEQA and NEPA requirements to address environmental impacts associated with acquiring water to meet the flow objectives in the SJRA. This document addressed the need for up to 110,000 acre-feet to meet a 31-day spring pulse flow target in the San Joaquin River at Vernalis. The SJRA allows for willing sellers among the SJRGA to sell Reclamation additional water when the spring pulse flow target exceeds 110,000 acre-feet. The FEIS/EIR prepared for the SJRA acknowledged the need for this additional water from willing sellers in some water years but did not address the environmental impacts associated with acquiring this supplemental water.

The purpose of the DSEIS/EIR is to update and supplement analyses presented in the 1999 FEIS/EIR to address the acquisition of up to 47,000 acre-feet of water annually during the 2001 through 2010 water years.
