

and technical assistance needs; monitor compliance with cooperative agreement requirements; evaluate the progress made in achieving national and program-specific goals; and respond to inquiries regarding program activities and effectiveness. Funding recipients currently have a wide latitude in the content of the information they report with some recipients providing extensive and detailed programmatic information and other recipients providing minimal detail regarding TCP operations. Historically, information has been collected and submitted via hard-copy paper document. The manual reporting system significantly impacts the OSH staff's ability to accomplish its responsibilities resulting from providing TCP funds, particularly with respect to compiling, summarizing and reporting aggregate TCP program information.

The proposed change in data collection methodology is being driven by OSH development of an automated management information system (MIS) to maintain individual TCP information and to normalize the information reported by these programs. The proposed data collection will utilize a more formal, systematic method of collecting information that has historically been requested from individual TCPs and will standardize the content of this information. This will facilitate OSH staff's ability to fulfill its obligations under the cooperative agreements; to monitor, evaluate and compare individual programs; and to assess and report aggregate information regarding the overall effectiveness of OSH National Tobacco Control Program (NTCP). It will also support OSH broader mission of

reducing the burden of tobacco use by enabling OSH staff to more effectively identify the strengths and weaknesses of individual TCPs; to identify the strength of national movement toward reaching the goals specified in *Healthy People 2010*; and to disseminate information related to successful public health interventions implemented by these organizations to prevent and control the burden of tobacco use. The OSH anticipates that the state burden of providing hard-copy reports will be reduced with the introduction of the web-based progress reporting system. It is assumed that states will experience a learning curve in using this application, and the reported burden will be reduced once they have familiarized themselves with this system. The total costs to respondents are estimated at \$12,219.60.
